- Peanut, f13
- Soybean, f14
- Wheat, f4
- Total IgE

Allergens Indicated by Cap Codes

d=dust mites (house), e=epidermal, g=grass, i=insect, m=mold, t=tree, w=weed

ImmunoCAP® Specific IgE Blood Test

The ImmunoCAP Respiratory Allergy Profile provides an accurate and convenient method of confirming or excluding atopy in patients with allergy-like symptoms. In the United States, half of all chronic rhinitis cases are caused by allergies.¹ These cases require different treatment than that used for non-allergic rhinitis. Furthermore, allergy testing helps identify the 60% of asthmatics whose asthma is triggered by allergies.² Managing the allergy is often beneficial in these cases. Thus, allergy testing results can be helpful when making treatment decisions.

Because different types of allergens are found in different parts of the country, Quest Diagnostics offers Regional Profiles that focus on allergens specific to that region. By using the appropriate Regional Profile, your patients' test results are customized to their geographic location.

CPT CODES*: 86003 x 11 Specific IgE
82785 x 1 Total IgE
